

V8

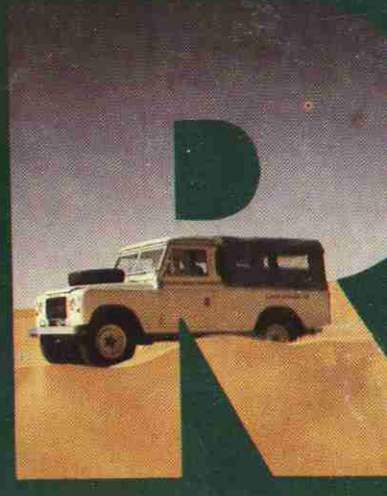

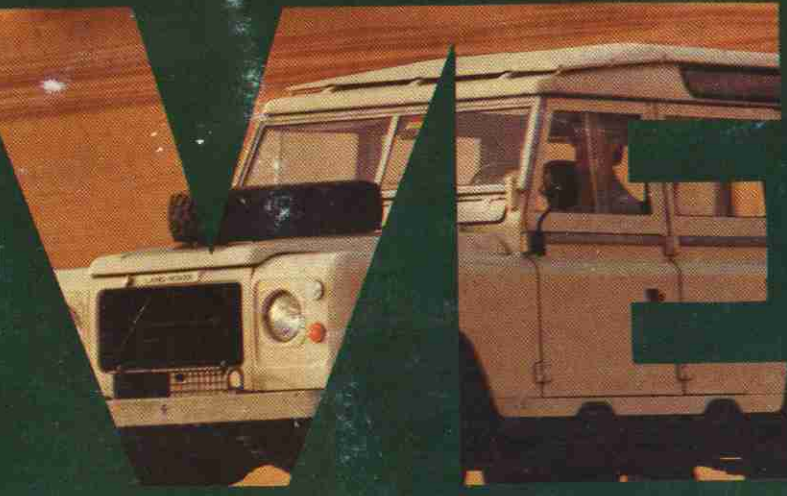

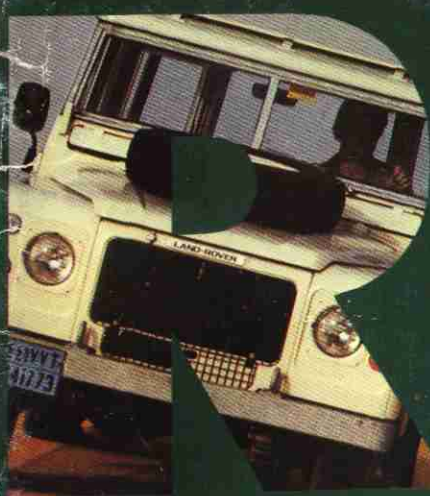

The makers of 4-wheel drive vehicles for over 30 years

LAND

ROVER

Like every other Land-Rover, the new V8 is one of the toughest, most rugged vehicles you can drive – on or off the road.

But now it has more power than ever before.

Using our well established, reliable 3500 engine, we've been able to give our tried and tested Land-Rover design more speed, more torque, more towing power – and even greater ability to tackle the world's toughest terrain thanks to its 4-wheel drive.

With 30 years of experience built into every Land-Rover you can be sure it's going to last for years.

The suspension and transmission are immensely strong.

The body, being aluminium, is not only light in weight, it is also resistant to corrosion.

Now more than ever, with its new extra power, you can be sure it will take you to the kind of places no ordinary vehicle could ever reach.

Land-Rover V8. A new breed with a great pedigree.
